## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-5 and 8-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Holmes (US 4,217,570).

Holmes anticipates the structure claimed including a ceramic substrate made of silicon nitride, an insulating layer made of silicon oxide which is disclosed by the applicant to have the resistive volume higher than the silicon nitride where the volume resistance of the insulating layer is not less than 10 times larger than the volume resistivity of the silicon nitride ceramic substrate, a resistance heating element formed on the insulating layer and the thickness of the insulating layer being at minimum average of .1 um.

3. Claims 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Bogdanski et al (US 6,150,636).

Bogdanski et al anticipates the structure claimed having a ceramic substrate with a resistance heating element formed thereon and the ceramic substrate having an unevenness or warp in the range less than 100 um or, preferably, less than 50 um.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sang Y Paik whose telephone number is 703-308-1147. The examiner can normally be reached on M-F (8:00-5:30) First Friday Off.
